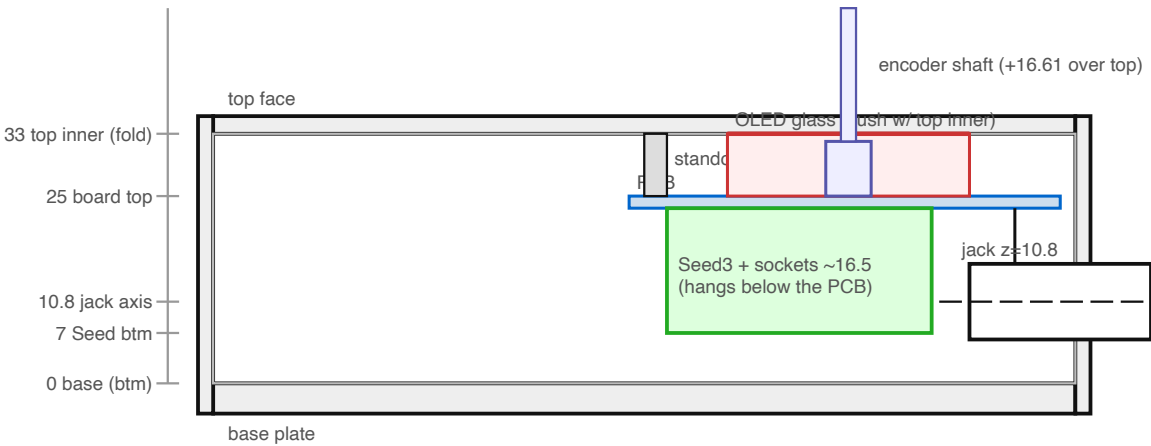
1590XX SIDE ELEVATION (height study, projected) -- PRINT AT 100%

ALL heights MEASURED off the prototype + box 2026-10-10 (recalibrated caliper). Front=left, back wall=right.
Cavity 33 mm (35.30 box - 2.33 top), walls 2.33 mm. Gap 8.24 (OLED glass flush, encoder clears). Jack axis 13.99 below the board.
Z datum shared with the fold-up flap: z=0 = base (pedal bottom), z=33 = top inner (the fold edge), jack z=10.8.



Jacks BOTTOM-MOUNTED: barrel hangs below the board -> axis z=10.8 (~33% up the 33 mm wall, lower third).
Budget: Seed 16.5 + PCB 1.6 + gap 8.24 = 26.3 of 33 mm cavity -> ~6.7 mm spare over the base.
Check the plug + base-plate battery box don't crowd down there. TRS/DC bottom-mount (legs up); USB = Seed's own port.
