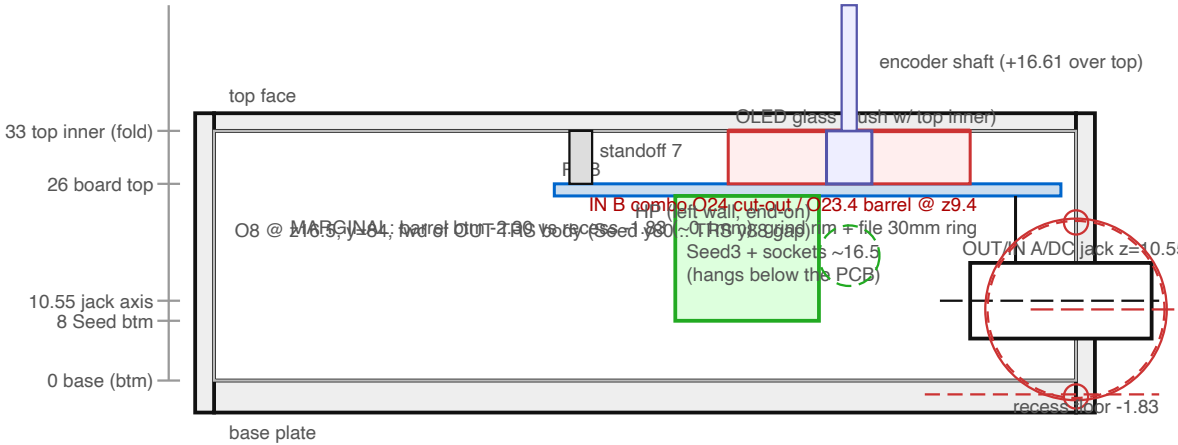
1590XX SIDE ELEVATION (height study, projected) -- PRINT AT 100%

ALL heights MEASURED off the prototype + box 2026-10-10 (recalibrated caliper). Front=left, back wall=right.

Cavity 33 mm. Top face 2.33, F/R walls 2.5, bottom lid 4.23 mm (all measured). Gap 7 (OLED glass flush, encoder clears). Jack axis 15.45

Z datum shared with the fold-up flap: z=0 = base (pedal bottom), z=33 = top inner (the fold edge), jack z=10.55.



Jacks BOTTOM-MOUNTED: barrel hangs below the board -> axis z=10.55 (~32% up the 33 mm wall, lower third).

Budget: Seed 16.5 + PCB 1.6 + gap 7 = 25.1 of 33 mm cavity -> ~7.9 mm spare over the base.
