

1590XX SIDE ELEVATION (height study, projected) -- PRINT AT 100%

Heights MEASURED off the prototype 2026-10-10 (recalib). Front=left, back wall=right. Seed ~17 still est.

Cavity 33 mm (35.30 box - 2.3 top), walls 2.33 mm. Gap 8.24 (OLED glass flush, encoder clears). Jack axis 12.4 below the board.

Jacks BOTTOM-MOUNTED (barrel below the board) -> axis $z=9.8$ = ~33% up the 33 mm wall (lower third) -- barrel drop 12.4 + the 8 mm gap the controls force. Check the plug + base-plate battery box do not crowd down there on the casting.

Seed hangs to ~5 mm over the base (if 17 tall). TRS/DC bottom-mount, legs up; USB = Seed's own port.
